

TECHNICAL DATA SHEET

ANTIPIIT 10

Antipit 10 is a liquid product used to remove surface tension in the solution so that the hydrogen gas does not adhere to the surface thereby eliminating pitting in nickel plating solutions.

MAINTENANCE :

The Antipit 10 is to be added only when the pitting tendency is observed on the plated parts or when the foaming is too low in the nickel bath. Moreover, all the brightening agents do contain required amount of antipitting agents and hence regular additions are normally not required.

However when the solution is given batch carbon treatment, the Antipiting agents gets consumed and so we recommend an addition of 0.2-0.3 cc/l of Antipit 10.
